Cochise Linux User Group

Get to know your command line!  
By: Paul Bernard

[CochiseLinuxUsersGroup.github.io](https://CochiseLinuxUsersGroup.github.io)

# What is the Command Line?

- Simply put, a text-based way to interact with your operating system.
- The terms CLI (Command Line Interface) and Shell are often used to describe the command line.
- You can have a true text-based command line interface or one that is run through the GUI.

# Text Based CLI

- More common in server based distributions.
- Can be accessed by ctrl + alt + f2 through ctrl + alt + f6.
- Each function key gives you a different workspace.
- Ctrl + alt + f1 will bring you back to the GUI (if you had one running)

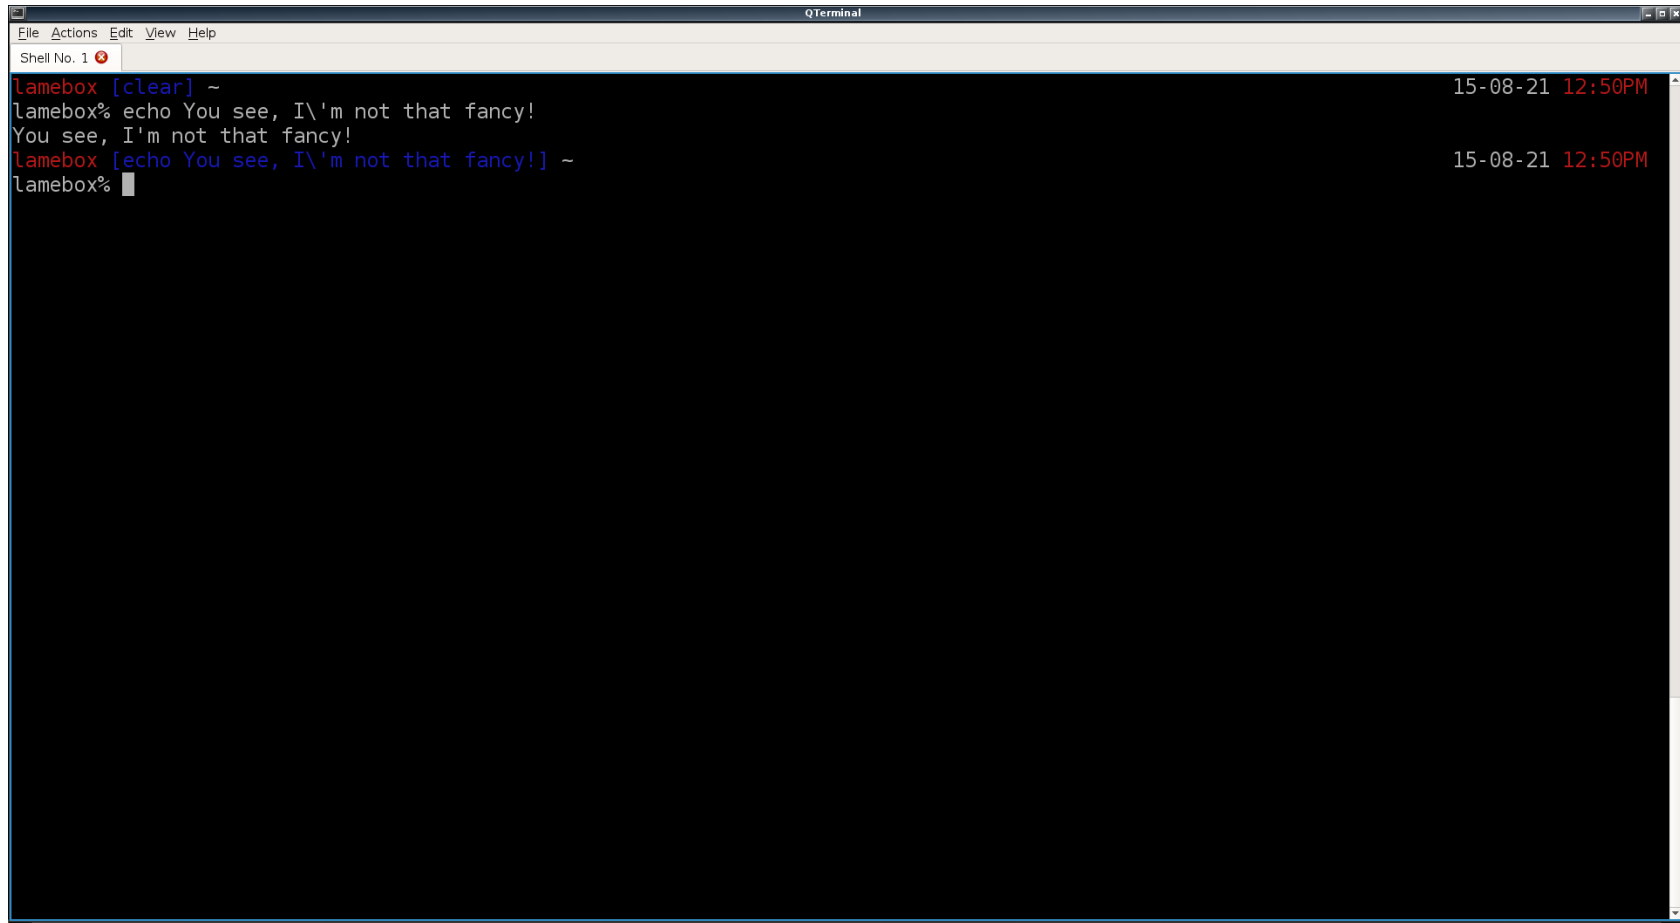

# GUI Based Terminals

- This will be the most common way to use the command line.
- Linux distributions have a graphical based terminal installed by default.
- It is generally bundled in the desktop environment and can be accessed through the menu system.

# Common GUI Terminals

- Konsole – KDE
- Gnome-Terminal – Gnome
- XFCE terminal – XFCE
- Terminology – Enlightenment
- Xterm – Xorg
- LXTerminal – LXDE
- There are many many more to choose from.

# What does this 'Terminal' thing look like?

A screenshot of a QTerminal window. The title bar reads "QTerminal". Below the title bar is a menu bar with "File", "Actions", "Edit", "View", and "Help". A tab labeled "Shell No. 1" with a red close button is visible. The terminal area has a black background. The prompt "lamebox [clear] ~" is shown in red. The command "lamebox% echo You see, I\'m not that fancy!" is entered in white, and its output "You see, I\'m not that fancy!" is displayed below it. The prompt "lamebox [echo You see, I\'m not that fancy!] ~" is shown in red. The command "lamebox% " is entered in white, followed by a cursor. On the right side of the terminal, the date and time "15-08-21 12:50PM" are displayed in red.

```
lamebox [clear] ~ 15-08-21 12:50PM
lamebox% echo You see, I\'m not that fancy!
You see, I\'m not that fancy!
lamebox [echo You see, I\'m not that fancy!] ~ 15-08-21 12:50PM
lamebox% 
```

# Basic Commands

- ls – list files in a directory
- cd – change a directory
- cp – copy a file or directory
- mv – move a file or directory
- rm – remove a file or directory
- kill/killall – killing tasks
- sudo – run a command with root privileges.

# Why Use the Command Line?

- Can often be a quicker way to complete a task.
- Sometimes you may encounter issues with the GUI that can easily be resolved with the command line.
- Scripting and automation. (Makes life easier)

# Some Notable Command Line Programs.

- Irssi – text based irc client (The client of the future).
- vi or vim – text based text editor.
- Elinks – text based web browser.
- Moc – music over console – a text based music player.
- Mutt – text based email client.
- There are many, many more...
